ECO-BIO Conference — March 6-9, 2016 — Rotterdam, Netherlands

With fossil fuels becoming more and more limited and global change having unmistakable effects on our everyday lives, working toward a suitable future for both humans and all ecosystems of the world becomes essential.

Biobased Economy focuses on developing industrial viable, safe and ecologically friendly biobased (renewable biological sources) solutions to build a sustainable society, involving food, chemicals, energy and materials.

Complementing these technological developments are insights and discussions on societal, economic and environmental relevant and interdisciplinary topics such as 'Cradle-to-cradle', 'green or circular economies', 'climate change mitigation', 'energy and food security', 'resource efficiency', 'sustainability in general' and 'resource, food and product safety'.

This conference will be a first of its kind and will highlight the emergence of the research and innovation field, where we are today and what needs to be done to develop an economically feasible, safe, sustainable, and ecologically friendly biobased future. The conference will be a platform to further the discussions on this highly societal relevant topic.

Combining industrial needs with an approach from an academic, environmental and societal point of view is a new approach and we welcome your participation and views. [READ MORE](#)

***International Biomass Conference and Expo — April 11-14, 2016 —
Charlotte, NC***

The International Biomass Conference & Expo unites current and future producers of biomass-derived power, fuels and chemicals with waste generators, energy crop growers, municipal leaders, utility executives, technology providers, equipment manufacturers, project developers, investors and policy makers. The event fosters public and private partnerships that help bioenergy producers and large-scale waste generators identify and assess available production resources and viable technology solutions for improving operational efficiencies and reducing industrial greenhouse gas emissions. Volatile energy costs, mounting climate change concerns and the anticipation of federal carbon cap-and-trade policies are compelling waste generators to think differently – much differently – about waste liabilities and, in some cases, the rising value of already valuable process side streams. Global Agribusiness Forum -- July 4-5 2016 -- Sao Paulo, Brazil

The Global Agribusiness Forum (GAF), held every two years, is internationally recognized as the most important event of the agribusiness in the world. By encouraging debates between the most important leaders, authorities and specialists of the agribusiness, the event has been the platform to identify solutions for the challenges and opportunities for the agriculture and livestock across the globe.

In its last edition, the global agriculture and livestock chain was officially represented by 1,100 leaders and authorities from 43 countries, 129 partner organizations, which included the private sector, governments, associations, entities, universities, non-governmental organizations and communication vehicles. The GAF counted with the official support of the governments of Brazil, European Community, Canada, Cuba, France, Turkey, Singapore and the state governments of Manitoba, Ontario and Sao Paulo. With live transmission by Canal Rural and internet, GAF was watched by 36,000 spectators.

In July 2016, the GAF2016 will promote the debate of how to integrate producers and consumers, add value to production and increasing productivity, ensure the food supply to the world of constant transformation and growth. The results and proposals of the event, once again, will be compiled and published in an official document – The Agribusiness Consensus – that will be sent as a suggestion to authorities of the agriculture sector, and public policies makers of all over the world.
