

U.S. Department of Energy Biomass Program

Major Biomass Pathways

1.366 billion dry tons biomass at 100 gallons/ton = 136.6 billions gallons/year

Biomass Program Objectives and Goals

Make biofuels cost competitive with petroleum based on a modeled cost for mature technology at the refinery gate Forecast to be \$2.60/gal gasoline equivalent by 2017

Help create an environment conducive to maximizing production and use of biofuels, 21 billion gallons of advanced biofuels per year by 2022 (EISA) (14 billion gge)

Research & Development

Feedstock Systems

- Sustainable regional biomass resources:
 130 million dry tons/yr
 by 2012
- Improved logistics systems: \$50/dry ton herbaceous by 2012

Conversion Technologies

Biochemical

 Cost of converting feedstocks to ethanol: \$1.40/gal gasoline equivalent (gge) by 2012

Thermochemical

- Cost of converting woody feedstocks to ethanol: \$1.30 gge by 2012
- Cost of converting woody feedstock to hydrocarbon fuels: \$1.50 gge by 2017

Demonstration & Deployment

Integrated Biorefineries

- Validate integrated process technologies
 - 4 commercial scale
 - 8 demonstration scale
 - Up to 20 pilot or demonstration scale*

Infrastructure

- Testing of E15& E20
 - develop biofuels distribution infrastructure
 - blend pumps

Increase understanding of and impacts on:

Sustainability & Analysis

- GHG emissions
- Water quality
- Land use
- Socioeconomics
- Predictive Modeling
- International

Methodology Topic Selection, Project & Program Review Processes

Planning

Biomass Technical Advisory Committee Annual Reports (2002 – 2008)

Vision for Bioenergy and Biobased Products in the U.S. (2002, 2006)

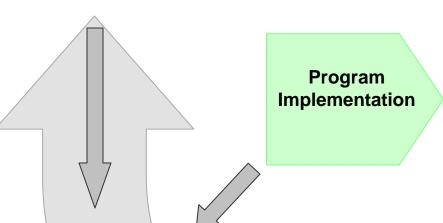

Roadmap for Bioenergy and Biobased Products in the U.S. (2002, 2007)

Breaking the Biological Barriers (2005)

Breaking the Thermochemical Barriers (2007)

National Algal Biofuels Roadmap (TBD – 2009)

Request for Information (Feedstock Logistics 2008)

Competitive Solicitation

- ■USDA-DOE Joint Solicitation (2002 2009)
- ■Commercial-Scale Biorefineries (2007) (\$272M)
- ■Demonstration-Scale Biorefineries (2008) (\$210M)
- ■Enzyme Cost Reduction (2008) (\$34M)
- ■Ethanologen Cost Reduction (2007) (\$23M)
- ■Syngas Clean Up (2008) (\$7M)
- ■Universities (2008) (\$4M)
- ■Pyrolysis (2009) (\$9M)
- ■Feedstock Logistics (2009) (\$21M)

Labs

- ■Core Research
- Technology Validations

Steering Committee

Neal Gutterson Mendel Technologies

Jay Keller Sandia National Labs, SC Chair

Roger Prince ExxonMobil

Liz Marshall World Resources Institute
John May Stern Brothers (Financial)

Terri Jaffoni Cargill (Retired)

Susan Schoenung Bechtel R&D (Retired), SC Co-Chair

^{*8} Academics participate as reviewers

Barriers to Speed and Scale

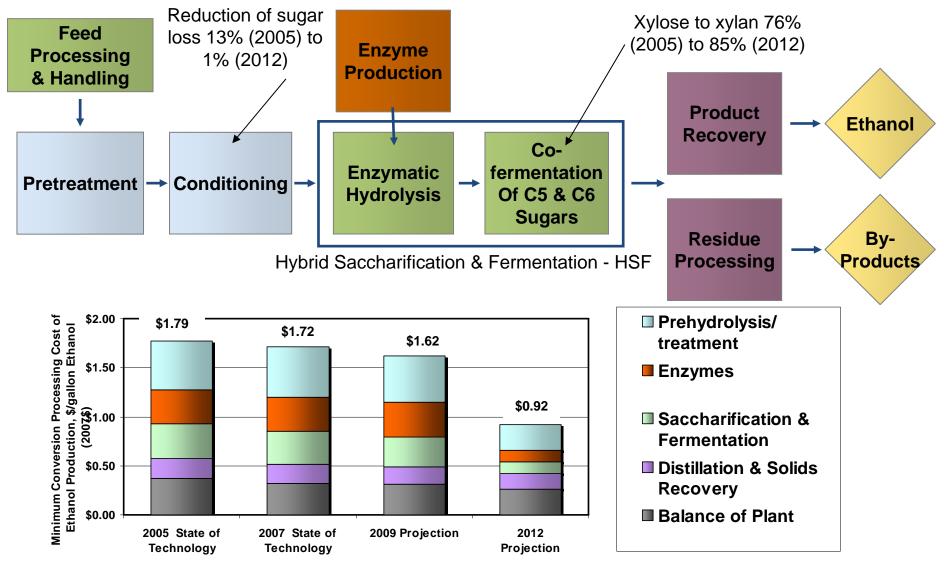

Barriers	DOE Solution
Pioneer Plants: Incompatibility with Project Finance – no off-take, commodity price risk Credit Enhancements – market risk is not mitigated for ethanol Commercial Readiness – applicants are ill-informed when debt financing should be applied	Resolve loan guarantee program concerns- Higher debt service coverage ratios Higher equity contribution by project sponsor
Pilot and Demonstration Scale Biorefineries: financing uncertainty, NEPA process	DOE cost share; streamline the NEPA process; assist in developing parallel technology solutions
Policy: partial implementation of BCAP, lack of monetization of benefits, no Renewable Portfolio Standard, etc.	Full implementation of BCAP; policy that values carbon & other environmental services; passage of RPS
Feedstock availability & logistics systems	R&D on advanced feedstocks & logistics systems at scale that can support commercial biorefineries (for cellulosic & algal feedstocks)
Conversion technology breakthroughs	R&D on pre-treatment, cost-effective enzymes, pyrolysis oil upgrading, catalyst durability, etc.
Public Acceptance – Sustainability	R&D on GHG impacts, indirect land use, & carbon, nitrogen, phosphorus, & water fluxes; watershed-scale field trials
Near-term: Ethanol Blends; Long-term: Move to hydrocarbon fuels & power	Complete intermediate blends testing by Summer 2010; expansion of advanced biofuels R&D focus on power & products

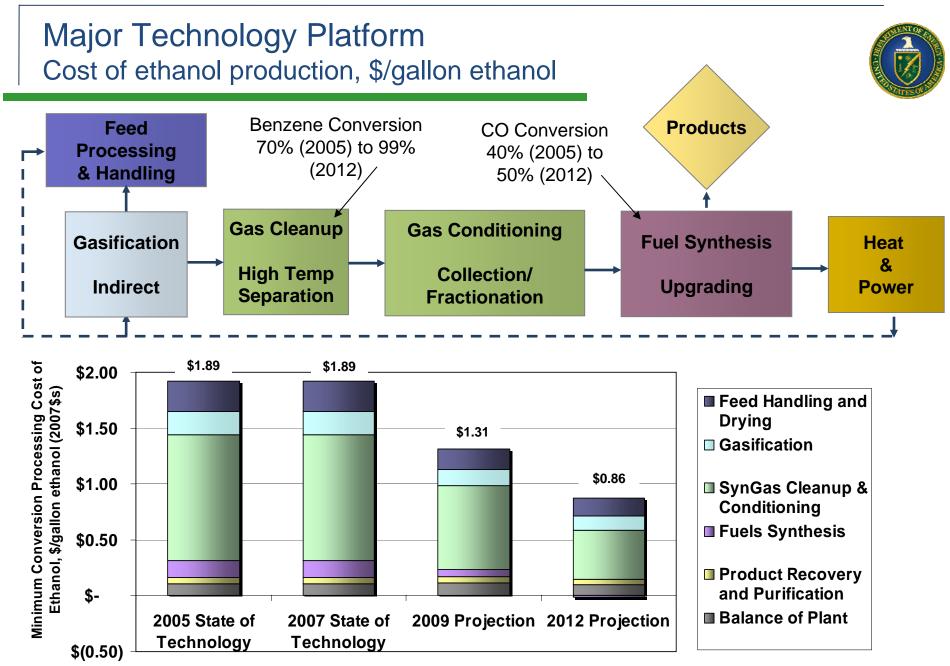

Biochemical Conversion/Enzymatic Hydrolysis

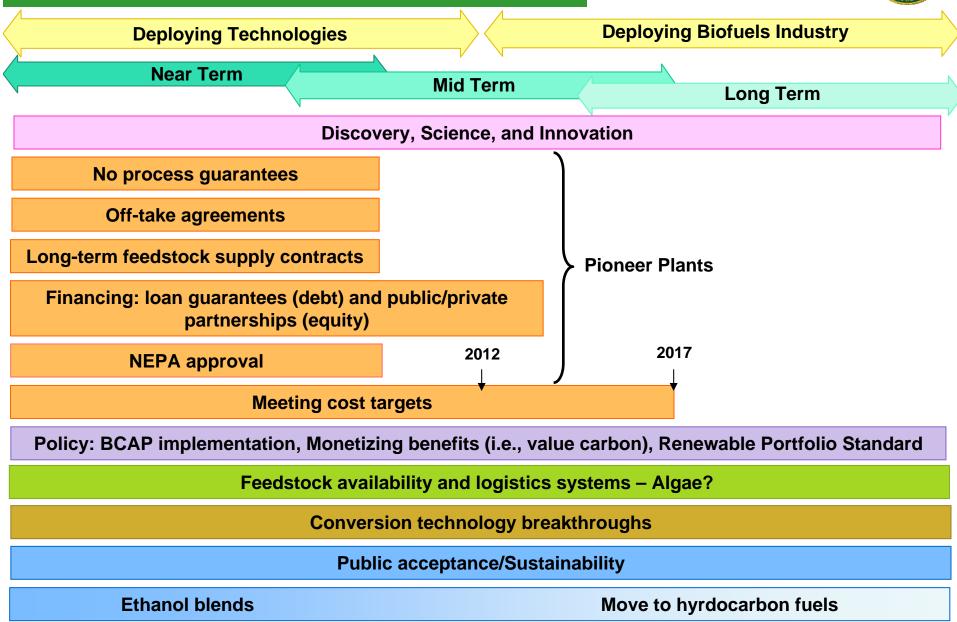

^{*} Conversion costs represented in the figure above are based on conversion of corn stover and equate to an Minimum Ethanol Selling Price \$1.49 in 2012.

^{*} Conversion costs represented in the figure above are based on conversion of woody feedstocks and equate to an Minimum Ethanol Selling Price \$1.57 in 2012.

Barriers to Speed and Scale of Technology

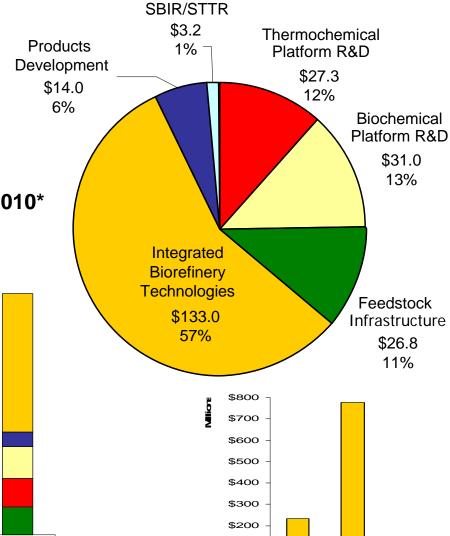

Biomass Program Budget Request, FY2010 (millions)*

FY2010 budget request reflected increased focus on *Thermochemical Conversion* technology and *Feedstock Infrastructure*.

Biomass Program Budget History, FY2006-2010*

Key Strategic Relationships

- May 5, 2009 Presidential Memorandum Biomass Interagency Working Group
 - High level with EPA, USDA, and DOE
 - Develop Biofuels Industry
 - Coordinate Interagency Policy
- Biomass R&D Act of 2000 (amended by legislation)
 - Biomass Research & Development Board
 - Biofuels Interagency Working Groups
 - Biomass Technical Advisory Committee
- Bioenergy Research Centers
 - Joint BioEnergy Institute (LBNL)
 - Bioenergy Science Center (ORNL)
 - Great Lakes BioEnergy Research Center (Univ. of WI)
- U.S. Feedstock Partnerships
 - Regional Feedstocks Partnerships
 - Council on Sustainable Biomass Production
- Global Partnerships
 - International Energy Agency
 - Conservation International
 - Global Bioenergy Partnership

Recovery Act Funding and Initiatives Biomass R&D and Demonstration Projects - \$800 Million in Funding

\$480M Pilot and Demonstration-Scale Biorefineries

Validate technologies for integrated production of advanced biofuels, products, and power to enable financing and replication. 10 to 20 awards for refineries to be operational within 3 years:

Up to \$25M for each pilot-scale project

Up to \$50M for each demonstration-scale project

\$176.5M Commercial-Scale Biorefineries

Increase in funding for prior awards; two or more projects Expedite construction; accelerate commissioning and start-up

\$110M Fundamental Research

\$20M: Integrated Process Development Unit

\$5M: Sustainability research with the Office of Science

\$35M: Advanced Biofuels Technology Consortium

\$50M: Algal Biofuels Consortium to accelerate demonstration

\$20M Ethanol Infrastructure Research

Optimize flex-fuel vehicles operating on E85

Evaluate impacts of intermediate blends on conventional vehicles

Upgrade existing infrastructure for compatibility with E85

\$13.5M NREL Integrated Biorefinery Research Facility: expand the pretreatment capacity
