**Subject:** Tesla Roadster NOT "Green"

Dear Editor:

I'm glad Warren Brown had fun driving the Tesla Roadster. (A Jaw-Dropping Ride, Batteries Included, Sunday Jan 25, 2009)

However, "It consumes no fossil fuels..." Are you kidding? The last time I checked, coal was a fossil fuel. I think you owe us a retraction. Take a look at the little paper that comes about every quarter with your electric bill. In this area, you will notice that maybe 3% of what comes out of your outlet and into your Tesla is renewable. Sure, a significant amount is also nuclear power. But, "no fossil fuel" indicates to many readers that this Plug-In Electric Vehicle is a "green" technology. This is so not true.
